### Okaloosa County Saltwater Beach Monitoring Results For April 2, 2012

The Okaloosa County Health Department conducts weekly saltwater beach water quality monitoring at 12 sites through the Healthy Beaches Monitoring Program. The water samples are analyzed for enteric bacteria (both fecal coliform and enterococci), that normally inhabit the intestinal tract of humans and animals and which may cause human disease, infections, or rashes. The presence of enteric bacteria is an indication of fecal pollution, which may come from stormwater runoff, pets and wildlife, and human sewage. The purpose of the Healthy Beaches Monitoring Program is to determine whether Florida has significant beach water quality problems.

Site	Name	City	Fecal Coliform	Water Quality	Enterococci	Water Quality	Enterococci Geometric Mean	Water Quality
SP-1	<a href="#">Liza Jackson Park</a>	Ft. Walton Beach	68	Good	64	Moderate	45.89	Poor
SP-2	<a href="#">Garniers Park</a>	Ft. Walton Beach	1144	Poor	196	Poor	160.14	Poor
SP-3	<a href="#">Marler Park</a>	Okaloosa Island	4	Good	16	Good	16.29	Good
SP-4	<a href="#">Wayside Park</a>	Okaloosa Island	128	Good	16	Good	16.73	Good
SP-5	<a href="#">Poquito Park</a>	Shalimar	8	Good	112	Poor	78.28	Poor
SP-6	<a href="#">Gulf Islands National Seashore</a>	Okaloosa Island	4	Good	4	Good	12.0	Good
SP-7	<a href="#">East Pass</a>	Okaloosa Island	88	Good	12	Good	22.6	Good
SP-8	<a href="#">Lincoln Park</a>	Valparaiso	108	Good	20	Good	35.44	Good
SP-9	<a href="#">Henderson Park Beach</a>	Destin	4	Good	4	Good	6.34	Good
SP-10	<a href="#">Fred Gannon Rocky Bayou State Park</a>	Niceville	140	Good	8	Good	27.41	Good
SP-11	<a href="#">James Lee Park</a>	Destin	4	Good	60	Moderate	21.34	Good
SP-12	<a href="#">Camp Timpoochee</a>	Niceville	4	Good	12	Good	17.3	Good

Water quality classifications are based upon:

1. Florida's Department of Environmental Protections (FDEP) adopted Criteria for Surface Water Quality Classifications (Chapter 62-302.530, Florida Administrative Code), which establishes a fecal coliform standard greater than or equal to 400 colony forming units per 100 milliliters for 10% of the samples, and
2. United States Environmental Protection Agency's (EPA's) recommended standard for enterococci of greater than or equal to 104 colony forming units per 100 milliliters of marine water, or a geometric mean of the five most current weekly samples of greater than 35 colony forming units per 100 milliliters of marine water.

An advisory has been issued for **Garniers Park** of Ft. Walton Beach, based on the enterococci standard recommended by the EPA and the fecal coliform standard recommended by the FDEP. This should be considered a potential health risk to the bathing public.

Advisories have been issued for **Liza Jackson Park** and **Garniers Park** of Ft. Walton Beach, and for **Poquito Park** of Shalimar -- based on the geometric mean standard recommended by the EPA. This should be considered a potential health risk to the bathing public.

Bacteria counts often come back high during or after a rainfall event. If you have any questions, please contact the Okaloosa County Health Department at (850) 833-9247 or (850) 689-7859, or visit the Department of Health's Internet Beach Water Quality website, [www.doh.state.fl.us](http://www.doh.state.fl.us), click on "Floridians and Visitors" - under "Food, Water, Air, Land" choose "Beach Water Quality." You can also visit [www.HealthyOkaloosa.com](http://www.HealthyOkaloosa.com), and click the "Healthy Beaches" link to be taken to a list of the Okaloosa County "Healthy Beaches" sites and maps.
