Okaloosa County Saltwater Beach Monitoring Results For July 16, 2012

The Okaloosa County Health Department conducts weekly saltwater beach water quality monitoring at 13 sites through the Healthy Beaches Program. The water samples are analyzed for enteric bacteria (enterococci) that normally inhabit the intestinal tract of humans and animals and which may cause human disease, infections, or rashes. The presence of enteric bacteria is an indication of fecal pollution, which may come from stormwater runoff, pets and wildlife, and human sewage.

SP-2	Garniers Park	Ft Walton Beach	Pass	Good

Water quality classifications are based upon the United States Environmental Protection Agency's (EPA's) recommended standard for enterococci of greater than or equal to 104 colony forming units per 100 milliliters of marine water.

An advisory has been issued for **Clement E Taylor Park** of Destin based on the enterococci standards recommended by the EPA. This should be considered a potential health risk to the bathing public.
